

SAFETY ALLIANCE WITH HEALTHCARE PROVIDERS

Under the leadership of Critical Care professionals and Infection Preventionists, The ADVOCACY FOR PROFESSIONAL SAFETY (APS) was established to provide public education initiatives and resources supporting Professional Health and Safety initiatives for all healthcare providers. APS is a free resource for the most current safety regulations, equipment/devices, installations and products for the healthcare industry. Our program also includes partnerships with all major health organizations and Infection Prevention agencies, uniting to promote and share information about all current protocols

and solutions to limit the spread of viral diseases in medical centers and treatment areas. **APS supports public safety in three major ways:**

- 1) **PUBLISHING INNOVATIONS:** APS produces articles, news clips, social media posts, newsletters and other forms of info-sharing measures throughout the patient care community. We conduct significant research and report on the current safety technology trends for our growing subscriber base via our newsletters “THE JOURNAL OF MODERN HEALING” and Prevention101.org.
- 2) **OUR COMMUNITY OF CAREGIVERS:** APS is a united set of health-related associations and advocacy groups who carry their own alliances, partners and supporters within the professional community. Together, we interconnect to share, co-promote, collaborate and exchange resources for the benefit of our patients and our staff.
- 3) **MEDICAL SUPPORT & VALIDATION TESTING PARTNERSHIPS:** From clinical trials, product testing or surveying & reporting, many of our health professionals are interested in partnering with producers of current safety products and protocols. Some get involved as medical spokespeople, as clinical testers, clinical analysts or validators to confirm (or dispute) claims of efficacy.

SUPPORT OUR PREVENTION PROGRAMS

We seek supportive partners and sponsors to launch our key presentation programs, outreach projects and resource support. APS is starting its FALL 2020 mission with our health/safety seminar series-presented by our team of experts in Infection Prevention to cover these valuable topics.

- Non-chemical Innovations
- Disinfectant Reviews
- Prototypes on trial
- Cancer Patient Safety
- Daily Testing Updates
- Prevention Supplements Review
- PPE quality evaluations
- Air Infection Control
- Daily Personal Maintenance
